

Online Card Catalog

HSP's card catalog – the key to the manuscript collection – contains over one million individual, hand-written and typed cards with information about unpublished materials currently not searchable in *Discover*, HSP's online catalog.

To make these manuscript collections accessible to researchers around the world, HSP has collaborated with FamilySearch, one of the world's largest online genealogy databases, to digitize its card catalog.

The first phase of the initiative has been completed: researchers can now "flip" through digital scans of HSP's card catalog. In the next phase of this project, these scans will become indexed, allowing researchers to explore the card catalog using searchable terms and other metadata.

To begin searching HSP's online card catalog, [click here](#) [1].

Information about how to best search HSP's online card catalog is [available here](#) [2].
